

Maugny's 3 year algorithm

Maunny design through small projects, try make all applications in react (MERN stack) if possible, if not then convertible (algorithm), this will be used as base structure for [Maugny.com/ca](https://maugny.com/ca), and additional projects for GoHelpPal each year, if learning small stuff gives certifications then get them, mainly W3schools, FreeCodeCamp, and Mozilla(mdn)

2022:: Club landing page in React as Club Page will as The Maunny's Club repo, React, try use new applications learnt from now, also linked to club page influenced from GoHelpPal following diagrams

Part from practicing and learning MERN stack continuously from now learn and practice in sequence: Angular, Typescript, PHP, SASS, sMedia internal application software, AWS(do this end of August with certification, finish google ads and Amazon retail first)

2023: New react repo called maunny.com: Login, Checkout page to above to be taken from myBid and follow diagrams

Learn and practice MERN, Angular, Typescript, PHP, SASS, AWS

2024: maunny.com continued repo: React based new customer service page, with chat bot AI type feature, and part description page following diagram connected to customer account page similar to Tech Blog and bootcamp projects

Learn and practice MERN, Angular, Typescript, PHP, SASS, AWS

2025: start with MERN, Typescript and AWS, when YORK in middle year do Angular, PHP, SASS

Start with Maugny's original site prep, getting things together and additional components etc. Product research demand-availability-ordering self pick up and short-list, select suppliers (start with one main, make proper connection with no inventory investment)

2026: come back to Javascript, MERN, Angular (with typescript)

Distributional promotion (Google Adds, Facebook Marketplace and Amazon, Barrie, and surrounding areas coverage, 1800 number, site completion. Cloud services (AWS, customer database link). Market research, add response, short list supplier, Add increase: Facebook add, minor site revision continuation regularly,

2027: Javascript, MERN, Angular (with typescript)

Cost and profit analysis and portfolio of suppliers, Muchi contract law and payroll training, contract, hire: data protection and data analysis, hire techs first and you control them and know their work, at this most of start up steps are complete. Site revision, addition of other sections
